

3D Viewport: Navigation & Views

	Select / confirm action
	Cancel / context menu
	Orbit view
Shift + 	Pan view
	Zoom
Cmd + 	Smooth zoom
4 / 6 / 8 / 2	Orbit in steps (no middle mouse needed)
0	Switch to camera view
1	Front orthographic view
Cmd + 1	Back orthographic view
3	Right orthographic view
Cmd + 3	Left orthographic view
7	Top orthographic view
Cmd + 7	Bottom orthographic view
5	Toggle perspective / orthographic
 tilde	View snap pie menu
 period	Frame and zoom onto selected
 slash	Isolate selected object
Home	Frame all objects in scene
Shift + 	First person / fly camera

Mac setup: no numpad? Turn on *Edit > Preferences > Input > Emulate Numpad* so the number row works for these views. No middle mouse button? Turn on *Emulate 3 Button Mouse*, then *Option + left-drag* orbits.

Select, Transform & Cursor

A	Select all
Option + A	Deselect all
B	Box select
W	Change selection mode
G	Move (grab)
R	Rotate
S	Scale
X / Y / Z	Constrain to axis during move, rotate or scale
Option + G	Clear location (snap back to origin)
Option + R	Clear rotation
Option + S	Clear scale
Cmd + A	Apply menu (scale, rotation, location)
Shift + Tab	Toggle snapping
O	Toggle proportional editing
Shift + D	Duplicate selection
Shift + 	Place the 3D cursor
Shift + S	3D cursor snap pie menu
Shift + C	Cursor to world origin and frame everything
X	Delete
H	Hide selected
Option + H	Unhide all

Display, Shading & File

Cmd + S	Save
Cmd + Option + S	Save incremental
Cmd + Z	Undo
Cmd + Shift + Z	Redo
Z	Shading mode pie menu
Shift + Z	Jump straight to wireframe
Option + Z	Toggle X-ray
Shift + Option + Z	Show / hide overlays
T	Show / hide tools menu
N	Show / hide item settings sidebar
Ctrl + `	Show / hide gizmos (Cmd + ` is taken by macOS)
Q	Quick favorites menu
F2	Rename
F3	Search
F12	Render image
F11	View render
Cmd + F12	Render animation

Tip: hover any button or menu item in Blender and its shortcut shows in the tooltip. To see or change every binding, go to Edit > Preferences > Keymap.

On a Mac laptop the F-keys run media controls by default, so press fn + F12 to render, or turn on "Use F1, F2, etc. as standard function keys" in System Settings > Keyboard.

Edit Mode

Tab	Toggle Edit Mode / Object Mode
1 / 2 / 3	Select vertices / edges / faces
E	Extrude from face, vertex or edge
Cmd + B	Bevel
Cmd + R	Loop cut
K	Knife tool
Enter	Confirm knife cut
I	Inset faces
F	Fill face / edge
M	Merge menu
P	Separate
V	Rip vertices / edges
G + G	Edge slide
U	UV mapping menu
L	Select linked under cursor
Option + 	Select edge / face loop
Cmd + NumPad +	Select more (grow selection)
Cmd + NumPad -	Select less (shrink selection)
Cmd + V	Vertex menu
Cmd + E	Edge menu
Cmd + F	Face menu
Shift + Space	Edit Mode context menu
	Vertex / edge / face context menu

Object Mode

Shift + A	Add menu (mesh, light, camera, etc.)
Tab	Switch between Edit and Object Mode
	Object context menu
Shift + Space	Object Mode context menu
Cmd + J	Join objects together
M	Move to collection
Cmd + P	Set parent
Cmd + 1	Add subdivision modifier (level 1)
Cmd + 2	Add subdivision modifier (level 2)
Cmd + 3	Add subdivision modifier (level 3)

Cmd is shown throughout because Blender accepts it in place of Ctrl on macOS. Ctrl also works everywhere, so if a Cmd combo gets swallowed by the system, press Ctrl instead.
